INTERNATIONAL  
RELAY  
REO  
SELDEN

Definite superiority in design ... evident improvement in performance ... and genuine merit in a radically different engineering principle has been responsible for the wide acceptance accorded the new Kingston Vacuum Fuel Feeding systems by leading automobile manufacturers.

The Kingston Vacuum Tank and Booster increases intake manifold suction practically 500 per cent at wide open throttle, the point where the ordinary fuel system operates at its lowest efficiency.

This device is built by the oldest manufacturers of automotive equipment in America, makers of the famous Kingston carburetors.

**KINGSTON PRODUCTS CORPORATION**

*Manufacturers of Carburetors, Fuel Feeding Systems,  
Vacuum Tanks, Oil Pumps and Car Heaters*

**KOKOMO, INDIANA**
